

NOCAP

A safer, smarter food delivery platform

Transparent by design. Trustworthy by workflow.

CUSTOMER RESTAURANT ADMIN RIDER

HTML5 · JavaScript · Leaflet → Spring Boot · REST · MySQL

Turn uncertainty into visible trust

	CHALLENGE	LIMITATION	NOCAP RESPONSE
Restaurant quality	No verification or hygiene context		→ Admin verification + hygiene information
Review credibility	Fraudulent or unreliable reviews		→ Rule-based monitoring and flagging
Delivery progress	No real-time visibility		→ Live order and delivery tracking
Restaurant discovery	Search ignores proximity		→ Nearby discovery with OpenStreetMap
User assistance	No integrated support		→ Rule-based NoCap Assistant

Note: Hygiene information is a platform-level indicator, not official certification.

From isolated research to one integrated platform

CAPABILITY	FOODPANDA	LOCAL BANGLADESHI APPS	NOCAP
Food ordering	Yes	Yes	Yes
Restaurant discovery	Yes	Yes	Yes
Verification	Limited / platform-dependent	Varies by platform	Admin-mediated
Hygiene visibility	Limited / not standardized	Varies by platform	Platform-level info
Fake-review detection	Not publicly stated	Varies by platform	Rule-based monitoring
Live tracking	Supported orders	Varies by platform	Implemented
Rider + admin modules	Delivery operations	Varies by platform	Yes
Location search	Yes	Varies by platform	Yes
Assistant / support	Platform support	Varies by platform	Rule-based assistant
Integrated workflow	Ordering + delivery focused	Varies by platform	Full integration

Feature availability varies by location, restaurant, and order type for Foodpanda and local apps.

Integration is the innovation

Implemented with explicit rules — no AI / ML claim

One login. Four purpose-built journeys.

CUSTOMER Nearby → Menu → Cart → Checkout

RESTAURANT Manage menu → Accept → Update

ADMIN Verify → Hygiene → Reviews

RIDER Assigned → Status → Tracking

ORDER LIFECYCLE Accepted → Rider assigned → Status updates → Completed → Review

A clean path from interaction to data

Relational foundation. Working backend.

IMPLEMENTATION EVIDENCE

@Entity AdminAction
@Entity Rider { status enum }
@Entity Restaurant

Three journeys. One connected experience.

CUSTOMER

Nearby map → menu → cart → checkout

02

OPERATIONS

Restaurant updates → rider handling → tracking

03

TRUST + SUPPORT

Hygiene → reviews → admin → assistant

Contribution

DATABASE + BACKEND

Md Ashikur Rahman Siyam

STUDENT ID 2233642642

Java backend development
Backend APIs + server-side business logic
Authentication and authorization
Restaurant and food management APIs
MySQL connection
API testing, debugging, frontend integration

PRODUCT + INTEGRATION

Shudarshan Ghosh Durjoy

STUDENT ID 2222719042

Java backend development
Order, cart and delivery APIs
Backend CRUD operations
MySQL tables and relationships
Data validation and error handling
Testing, debugging, overall integration

NoCap closes the integration gap

MULTI-ROLE • LOCATION • TRUST • LIVE TRACKING • REST + MYSQL

CAPABILITY	TRADITIONAL	RESEARCH-FOCUSED	NOCAP
Verification	Limited or manual	Indirect prediction	Admin-mediated
Hygiene visibility	Rare	Predicted from reviews	Platform-level information
Review reliability	Limited	Detection research	Rule-based monitoring
Live tracking	Typically yes	No	Implemented
Integrated workflow	Partial	No	Full integration

Clear claims build credible systems

01 Review monitoring

Rule-based, not production-grade ML

02 Hygiene indicator

Platform-level, not official certification

03 Live tracking

Depends on location and network availability

04 NoCap Assistant

Rule-based, not natural-language AI

05 Production readiness

Needs larger-scale testing and security hardening

06 Payments

Secure payment gateway not yet implemented

Limitations are a roadmap, not hidden features

Proposed Future Work

Next steps toward a scalable, intelligent platform

- 01

PROPOSED

ML-based fake-review detection
- 02

PROPOSED

AI / natural-language chatbot
- 03

PROPOSED

Advanced hygiene-risk prediction
- 04

PROPOSED

Improved real-time GPS tracking
- 05

PROPOSED

Secure online payment gateway
- 06

PROPOSED

Personalized recommendations
- 07

PROPOSED

Push notifications
- 08

PROPOSED

Scalable cloud deployment + analytics
- 09

PROPOSED

Android and iOS apps

USER FEEDBACK

User feedback turns experience into improvement

Your feedback helps us maintain high standards across every order. It helps evaluate restaurant quality, delivery experience, app usability, and trust-related features.

TRANSPARENT • FAIR • ACTIONABLE • IMPROVING

Rate the order

Quickly rate your overall experience with the order and delivery.

Review the restaurant

Share your thoughts on food quality, packaging, and overall restaurant experience.

Report an issue

Let us know about any problems with your order or delivery.

Suggest an improvement

Share ideas to help us make NoCap better for everyone.

Order completed

Feedback submitted

Admin review

Service improvement

CONCLUSION

NoCap is more than a basic food-ordering platform.

Food ordering · Restaurant verification

Hygiene awareness · Review reliability

Location discovery · Delivery tracking

Multi-role management

NoCap: Order with Confidence.
